

Commitment for Nuclear Standoff

Although nuclear energy is preferable to fossil fuels due to being a clean energy source, it can cause enormous radiation disasters, are irreversible and whose effects continue for hundreds of thousands of years in the face of security risks, possible failures and uncontrollable natural events.

Emphasizing our goal of increasing investments in renewable energy, as Zorlu Enerji, we undertake not to include nuclear energy projects in our investment portfolio at this stage, taking into account the corporate principles and objectives of nuclear energy projects and current technologies and applications.

We encourage all our business partners and stakeholders to evaluate the risks that nuclear energy brings into consideration.

We are committed to sharing it with the public, in case of a change in our business and investment plans, by constantly following the technological and financial developments specific to nuclear energy.
