

ZORLU ENERJİ ENVIRONMENTAL POLICY

As a requirement of our social responsibility, we continue our work with an environmental management system based on the development of environmental awareness and the protection of natural resources to create a more habitable world. Because for us, the environment is an important trust that we will pass on to future generations. In this respect, in all our operations:

- **Reducing Environmental and Social Impacts and Preventing Pollution:** As a signatory of the United Nations Global Compact, we share our performance in this field with our stakeholders regularly and transparently. We choose materials and technologies to minimize adverse environmental and social impacts and develop systems to prevent pollution at its source. We manage our waste (solid, liquid, gaseous) and dispose of it in a way that does not harm the environment.
- **Resource Efficiency:** We ensure the most efficient use of energy and natural resources and aim to transition to renewable energy sources in all our operations.
- **Water Management:** We use water resources efficiently and commit to reducing water withdrawal and consumption per unit of energy produced. We protect water quality in the basins where we operate, manage our wastewater in accordance with the applicable legislation, and additionally monitor our water performance at operations located in water-stressed areas.
- **Access to Clean Water in Local Communities:** We recognize that safe access to water and sanitation is a fundamental human right. We commit to contributing to the improvement of safely managed drinking water, sanitation and hygiene (WASH) conditions in local communities in the regions where we operate, and to assessing needs in this area within the scope of our community investment programmes.
- **Regulatory Compliance:** We strictly comply with our national and international regulations and compliance with obligations. We establish adequate measures to ensure that the supply chain (including suppliers, contractors, and service providers) operates in accordance with the adopted health, safety, and environmental standards by following practices and procedures consistent with this policy.
- **Training and Awareness-Raising:** We provide regular training to our employees, suppliers, contractors and key business partners to increase environmental awareness.
- **New Investments and Continuous Improvement:** We conduct environmental and social impact analyses on our new investments and use technologies to minimize environmental and social impacts. We aim to improve continuously our environmental performance.

- **Transparency in Sustainability Reporting:** We share our sustainability performance with our stakeholders transparently according to GRI methodology. We monitor, manage, and report greenhouse gas emissions.
- **Net-Zero Emissions, Renewable Energy and Alignment with Climate Targets:** We aim to achieve net-zero emissions in our operations and energy production and strive to use 100% renewable energy. We pursue this goal in alignment with the 1.5°C goal of the Paris Agreement and with our near-term and Net-Zero emission reduction commitments approved by the Science Based Targets initiative (SBTi). In line with our SBTi-approved commitment, starting from 2021 until 2040, we commit to reaching net-zero by reducing direct carbon emissions per megawatt-hour in our electricity and heat production and to minimizing carbon emissions resulting from electricity trading to the maximum extent possible.
- **Climate Resilience and Infrastructure Development:** We develop infrastructures and operational processes resilient to climate change.
- **Supply Chain and Purchasing Management:** We measure and monitor environmental protection activities in the supply chain and train our subcontractors on this subject. We attach importance to the environmental awareness of companies during purchasing processes and prefer environmentally friendly solutions. We cooperate with our business partners and all stakeholders in protecting the environment and minimizing environmental impacts.
- **Distribution and Logistics:** We measure, monitor, and promote the adoption of sustainable practices in our distribution and logistics operations to mitigate our environmental impacts.

We make this policy applicable to all Zorlu Energy employees, all operations, suppliers, and key business partners. We implement environmental management procedures in all our operations and designate a responsible person to ensure the implementation of our environmental management policy and processes. Senior management regularly reviews the suitability, adequacy, and effectiveness of the environmental management system and ensures that all units adhere to these policies.
