

COMMITMENT FOR ACCESS TO ENERGY

With our various businesses in different areas of the energy sector, we serve the needs of all people for reliable, clean and accessible energy. We use our operational strength as of our high-capacity production power, qualified human resources, balanced portfolio, resource diversity and ability for producing innovative solutions, and become permanent and pioneer player of the global energy transformation.

We build and operate renewable power plants and continue to develop projects in countries that have problems in accessing safe and clean energy, and we continue to shed light on the lives of a significant part of the society with our activities.

Covering electricity generation and project development in the developing countries where we operate, adhering to our sustainability policy and ethical rules based on ensuring reliability in energy supply with our balanced portfolio; As part of our commercial activities that support the United Nations Sustainable Development Goal (SDG) 7, we strive to bring safe and clean energy to communities that do not have access to energy today.

We are committed to supporting all communities, including disadvantaged groups who need it most, to access safe and clean energy through social responsibility projects that we will develop outside of our commercial activities
