

OUR RESPONSIBLE LOBBYING APPROACH

As Zorlu Enerji, we embrace the values of trust, integrity, transparency, accountability and open and equitable communication that lie at the heart of our corporate culture, and we regard these values as safeguards for protecting and strengthening our reputation. Placing these values at the centre of the way we do business, we respect the existence, working practices, roles and responsibilities of the institutions and organisations with which we build relationships.

As one of the leading companies in the energy sector, and aware of the vital importance of renewable energy investments for securing a sustainable future in our country and worldwide, we engage in science-based advocacy and partnerships on public, civil society and private sector platforms in order to prioritise these investments across all subsidiaries, business lines and countries/regions in which we operate.

PUBLIC POLICY

We believe that understanding the needs of all our stakeholders and responding to their expectations with transparency is essential to our sustainable business success. Public institutions and organisations, regulatory authorities, local administrations and civil society organisations are foremost among the stakeholders who directly affect our business. As part of our responsible lobbying approach, and with a view to serving the highest benefit of society -particularly in the regions where we invest- we hold visits and meetings independently of any political affiliation with policy makers relevant to our sector, regulatory authorities, local administrations serving in our generation and service areas, and civil society organisations. We undertake numerous joint projects for the public benefit and share our expertise in the energy field voluntarily and on a scientific basis.

We value the views of all stakeholders concerning the Company and, guided by a principle of accessibility, we maintain continuous communication through both physical and digital channels. For stakeholders who wish to contact the Company directly, we publish our contact details - including our address, telephone numbers and e-mail addresses- on our corporate website, and we ensure that suggestions, comments and complaints submitted through our contact form receive a timely response. Our contact details are available at <https://www.zorluenerji.com.tr/en/contact>

In the event of an unavoidable dispute arising in joint work carried out with public bodies, our cooperation protocols state that proceedings shall be conducted before the competent courts in accordance with the laws of the Republic of Türkiye, with the aim of reaching a mutual resolution.

TRANSPARENCY AND ETHICAL PRINCIPLES

In our economic, social and environmental activities, we act on the principle of maintaining equal distance from public institutions and organisations, civil society organisations and political parties. Maintaining non-political communication, we do not enter into any relationship of interest, whether of monetary value or otherwise, with public officials, political figures or their representatives, and we comply with the applicable laws and regulations in this respect. We make no donations to parties or organisations active in the political sphere. In all reporting periods, we have made no monetary or in-kind contribution, whether direct or indirect, to political parties, candidates, elected representatives or political campaigns; this amount is TRY 0. We regard any decision by our employees and executives to take part in or contribute to a political activity or social initiative as a personal matter, and we do not permit activities intended to disseminate political views in the workplace, such as political propaganda. We do not allocate Company resources (vehicles, computers, e-mail and similar) to activities pursued for political purposes.

As Zorlu Enerji, we adopt the Zorlu Holding Code of Ethics. Accordingly, we never offer cash, gift vouchers or any gift equivalent to cash to our public stakeholders, nor do we accept such offers from them. We do not encourage public officials to breach the rules of conduct applicable to them. In line with the principles set out under the heading “Corporate and Personal Conflict of Interest” in the Zorlu Holding Code of Ethics, when receiving gifts, giving gifts or extending hospitality and entertainment -to public employees as to all our stakeholders- we apply criteria such as “proportionality” and “avoiding any adverse effect on the Company’s reputation in the eyes of our stakeholders or third parties”. Where such an offer is encountered, or where any observation or suspicion arises, we report it to the Code of Ethics Reporting Line at etik@zorlu.com. Detailed information on the Code of Ethics is available at the link here. https://www.zorlu.com.tr/media/kbiflbbr/zh_etik_ilkeler_rev-2026_eng_r1_040226.pdf

In our relations with legal and regulatory institutions and organisations, we are attentive to clear, complete, accurate and timely communication, and we approach all domestic and foreign institutions and organisations without discrimination when fulfilling our activities and legal obligations. We obtain information from reliable sources and do not disseminate false information. Should we receive a report alleging that our officers have misrepresented themselves in order to mislead third parties and/or public officials, we subject the allegation concerned to an investigative audit within the framework of our Company regulations and our Code of Ethics. We respect the privacy of our employees who are former public officials, and we safeguard the personal data of all our employees in accordance with the Turkish Personal Data Protection Law (KVKK).

As a publicly listed company, we disclose the Company's commercial activities, shares and state incentives through the Public Disclosure Platform (KAP). As there is no legal regulation in Türkiye governing or defining the framework for lobbying activities, we regulate our activities through our Company regulations and align our practices with international conventions. To this end, we have established internal and external audit mechanisms in order to ensure transparency and openness. Financial and operational processes are audited by the audit teams operating under Zorlu Holding Audit Group Presidency, on the basis of the International Standards for the Professional Practice of Internal Auditing and within the scope of the annual plan approved by the Board of Directors. In addition, where a report alleging a breach of business ethics arises in the context of stakeholder relations (including lobbying activities), a separate investigative audit is carried out by the Internal Audit, Control and Risk Management General Directorate, and the results are reported to the Ethics Committee for action. In 2025, no report was received alleging a breach of business ethics by employees of Zorlu Enerji Group Companies in matters conducted with public bodies.

We transparently disclose to the public the partnerships we have supported and financed on sector-specific matters to date. As Zorlu Group, we aim to direct our corporate donations and social support in the way that best benefits our society. Accordingly, we focus our donations and social support on projects, institutions and organisations that strengthen Zorlu Group's reputation, on activities that generate social benefit and on the individuals and organisations associated with such activities, as well as on accounts operating in the public interest and on not-for-profit organisations. In order to ensure diversity and a balance of capacity and resources among institutions, we conduct our lobbying activities in a range of fields -principally universities, local administrations and organisations operating in the energy sector- and, undertaking that the information we present to the public is current, honest and complete, we continue to publish information on the financial support we have provided since 2021 on our corporate website. We will continue to disclose the partnerships we develop and the projects we support at the end of each year.

We disclose the partnerships we established between 1 January 2025 and 31 December 2025 to the public through the list above and on our website. The total budget for donations, sponsorships and contributions realised on an annual basis is set out below. This amount covers sponsorships, events, organisations, donations to the earthquake region, scholarships and similar activities.

1 January - 31 December 2021	TRY 4,702,047
1 January - 31 December 2022	TRY 14,591,546
1 January - 31 December 2023	TRY 53,370,847
1 January - 31 December 2024	TRY 62,570,481
1 January - 31 December 2025	TRY 79,723,349

	2025
Lobbying, interest representation or similar (TRY)	0
Local, regional or national political campaigns / organisations / candidates (TRY)	0
Trade associations or tax-exempt groups (TRY) *	4,455,254
Other (e.g. spending related to ballot measures or referendums) (TRY)	0
Total contributions and other spending (TRY)	4,455,254

* This amount comprises the membership fees paid to the trade associations, associations and foundations of which we are a member. No part of these membership fees has been allocated to lobbying or to activities aimed at influencing public policy. Charitable donations and scholarships are outside this scope.

Total membership fees paid in 2025 to the organisations of which we are a member amounted to TRY 4,455,254.45. The three largest items within this amount are: IICEC TRY 2,142,710; Foreign Economic Relations Board TRY 322,500; TRAI (Turkish Artificial Intelligence Initiative) – TRY 188,700.

ALIGNMENT WITH GLOBAL ENVIRONMENTAL TREATIES

As Zorlu Enerji, we are committed to conducting all public policy and advocacy activities that we pursue - whether directly or through the organisations of which we are a member- in alignment with global environmental treaties. We align our engagement on climate and energy matters with the Paris Agreement's objective of limiting the global temperature increase to 1.5°C, our engagement on water matters with Sustainable Development Goal 6 (Clean Water and Sanitation), and our engagement on biodiversity and forests with the Kunming-Montreal Global Biodiversity Framework.

ADVOCACY ACTIVITIES

We carry out advocacy activities in order to reflect the specific challenges of the regions in which we operate and to develop solutions, and we implement these activities through the various civil society organisations of which we are a member, through sponsorship initiatives and through awareness-raising work conducted in our operating regions. Through our memberships of national

and international civil society organisations, we work to increase social development activities directed at the sector, and through the sector associations of which we are a member we share our views and recommendations on laws, regulations, incentives and similar matters relevant to our field of activity with regulatory bodies. We attach importance to conducting public policy and advocacy activities transparently and within ethical values, and we carry out the activities undertaken in this scope under the coordination of the Marketing and Corporate Communications Directorate and the Public Affairs Directorate.

Zorlu Enerji conducts its advocacy and lobbying activities through its memberships of various trade associations and civil society organisations, with the aim of contributing to the development of the sector and promoting sustainability objectives.

1. Management System for Lobbying Activities and Trade Association Memberships

The Company manages its lobbying activities and trade association memberships through a transparent and ethical management system. This system ensures that our activities are aligned with our sustainability objectives and values. The policy and oversight mechanism concerned covers all of Zorlu Enerji's business lines, subsidiaries and all geographies in which it operates.

Policy and Governance Mechanism

All our lobbying and membership activities are conducted in accordance with the highest ethical standards, applying the principles of avoiding bribery and managing conflicts of interest. These activities are regularly reviewed and approved by senior management and the Board of Directors.

Transparency and Accountability

Details of the lobbying activities conducted and the fees paid to trade associations are disclosed transparently in our internal and external reports. Where an inconsistency arises between the positions of the associations and our Company policies, a resolution is sought through constructive dialogue.

Alignment with Sustainability

All of these activities are conducted in alignment with the Company's sustainability objectives, climate action strategies and the United Nations Sustainable Development Goals. Our contributions to public policy aim to create a more sustainable business environment while taking into account the interests of all our stakeholders.

Cooperation with Trade Associations and Civil Society Organisations

Zorlu Enerji plays an active role on platforms such as TÜSİAD, SKD Türkiye (Business Council for Sustainable Development Türkiye), UN Global Compact Türkiye and the Geothermal Energy Association. Through these platforms, the Company contributes to sectoral policy and legislative processes and conducts awareness-raising activities in cooperation with a range of stakeholders.

TÜSİAD: Through its participation in the Energy Working Group and the Environment and Net Zero Policies Working Group, the Company supports the inclusive implementation of greenhouse gas monitoring, reporting and verification (MRV) processes and contributes to cross-sectoral knowledge sharing.

SKD Türkiye: The Company contributes to the Renewhub project conducted within the Renewable Energy Project Group and participates extensively in the events and webinars organised as part of the process. It also supports young prospective leaders in developing sustainability-focused innovative proposals under the Young Impact Programme.

Our relationship with these organisations varies from one organisation to another but is framed by membership and representation status. Our fundamental role is to follow the activities of these organisations and to contribute to knowledge sharing. At IICEC, where we hold a seat on the Board of Directors, we have in addition to our membership sponsored the preparation of a sectoral publication for the period 2023-2026.

UN Global Compact Türkiye Membership

As a member of UN Global Compact Türkiye, Zorlu Enerji complies with the global principles established in the areas of human rights, labour standards, the environment and anti-corruption. Through this membership, the Company participates in the training and capacity-building programmes offered by the association and benefits from its knowledge and resource-sharing platforms. Through the Communication on Progress (CoP) report published each year, our sustainability performance is monitored transparently to international standards and shared with the public.

Lobbying in the Field of Geothermal Energy

As a company whose generation portfolio is 100% renewable, Zorlu Enerji conducts its lobbying activities relating to geothermal energy -which accounts for a substantial share of its investments- through stakeholder communication and through the Geothermal Energy Association, of which it is a founding member. Through a variety of channels including television programmes, university panels, press releases and media communication, the Company explains to the public that geothermal energy is a clean and renewable resource.

2. Governance Framework for Public Policy Engagement with Clear Accountabilities up to Executive Level

The responsibilities established for our public policy engagement are clearly allocated up to the most senior level of management.

Senior Management: Strategies relating to public policy are determined at CEO and General Manager level and submitted for the approval of the Board of Directors. The Board of Directors, through the Audit Committee, periodically reviews the compliance of lobbying and advocacy activities with ethical standards and Company values. As the executive authority, senior management at CEO and General Manager level communicates with critical stakeholders such as investors, local administrations and employees; societal needs are identified through the Marketing and Corporate Communications Management and feedback is reported to Senior Management every six months.

Relevant Departments: The relevant departments, such as Corporate Communications, Sustainability and Legal, manage day-to-day engagement and operational processes. Each activity is planned and executed in cooperation between the relevant departments. Through the work carried out under the coordination of the Marketing and Corporate Communications Management, representation is ensured in the processes of formulating and implementing public policy, thereby ensuring that Company strategies are aligned with public policy in a manner that delivers the greatest contribution to the public benefit. The environmental impacts of investments are monitored regularly by the Sustainability, Quality and OHS-E Group Directorate, and matters involving risk are categorised according to their severity and corresponding action plans are prepared.

Accountability: Records of all activities, together with their purpose and expenditures, are maintained in detail. This information is regularly verified through internal audit mechanisms and shared transparently in our sustainability reports. This structure guarantees that our contributions to public policy processes are managed in a transparent and ethical manner that serves the Company's long-term objectives.

3. Statement of the Company's Position on Public Policies Relating to Climate Change (Aligned with the Paris Agreement)

Zorlu Enerji has adopted a policy on climate change that is aligned with the Paris Agreement, and raises awareness of the efficient and effective use of energy by sharing its accumulated knowledge within associations in the renewable energy and mobility fields. The Company meets with business leaders in order to explain the role of clean energy in economic growth and follows sectoral developments closely. As a member of the Climate Platform, established jointly by the Regional Environmental Center Türkiye (REC Türkiye) and TÜSİAD in order to support the efforts of the Turkish business community in combating climate change and to assist the transition to a low-carbon economy, we support collective action by the business community on matters such as the transition to a low-carbon economy, technology transfer, financing and carbon management.

Direct Engagement: Policies, Laws and Regulations on which We Took a Corporate Position in 2025

In order to accelerate the transition to a low-carbon economy and the clean energy transformation, we engage directly with public authorities and regulatory bodies (the Ministry of Environment, Urbanisation and Climate Change, EMRA and others). Our engagement takes place through participation in working groups organised by policy makers, responding to public consultations and submitting written proposals. The funding figure provided to policy makers in the reporting year was TRY 0. The principal policies, laws and regulations to which we contributed and on which we took a corporate position during 2025 are set out below.

Policy, law or regulation	Description of position and engagement	Corporate position
Turkish Climate Law (Law No. 7552) and its secondary regulations; the national Emissions Trading System (ETS) and the MRV framework	We advocate the implementation of a comprehensive legal framework covering the Climate Law, its secondary regulations and greenhouse gas monitoring, reporting and verification (MRV) processes, and the design of the MRV system in line with international standards. Engagement is conducted through the TÜSIAD Energy Working Group and the Environment and Net Zero Policies Working Group.	Support with no exceptions
Türkiye Green Taxonomy Draft Regulation	We advocate that sectoral technical thresholds, data infrastructure and measurement requirements be set in a manner consistent with the technical realities of renewable generation - particularly geothermal- that transition activities be defined without compromising environmental integrity, and that reporting and indicator sets be aligned with international practice. Our contribution was	Support with no exceptions

Policy, law or regulation	Description of position and engagement	Corporate position
	submitted through the Green Taxonomy Sub-Working Group established within SKD Türkiye.	
Türkiye's climate change mitigation strategy and action plan - energy transition component	We advocate the establishment of a predictable framework for renewable capacity expansion, grid modernisation and energy storage investments, and the design of an ambitious and implementable national mitigation pathway aligned with 1.5°C. Our views were submitted at the workshop convened by the Ministry of Environment, Urbanisation and Climate Change, drawing on our operational experience across geothermal, wind, hydroelectric and solar generation as well as electricity distribution and retail.	Support with no exceptions

4. Reviewing and Monitoring Process to Assess whether Lobbying Activities are Aligned with the Paris Agreement

The Company continuously reviews and monitors the alignment of its advocacy and lobbying activities on climate change with the Paris Agreement. It advocates the implementation of a legal framework encompassing the Climate Law, its associated regulations and MRV (greenhouse gas monitoring, reporting and verification) processes, and supports an inclusive national transition to a low-carbon economy. It further aims to help close knowledge gaps between actors from different sectors, consultants, verifiers and government bodies.

In the 2025 reporting period, all public policy engagement conducted directly by the Company was individually assessed for alignment with the Paris Agreement and found to be aligned in every case.

The climate policies of the organisations of which we are a member are reviewed through a two-stage monitoring process. Prior to membership, the association's articles and policy positions are examined for alignment with the Company's climate policy and 1.5°C objective. During membership, the publicly stated

positions and lobbying activities of the organisations concerned are assessed annually by the Sustainability Committee.

5. Framework for Addressing Misalignments between the Climate Positions of Trade Associations and the Company

As Zorlu Enerji, by planning all our activities in alignment with our corporate strategy, we both serve the public interest and support the achievement of net zero carbon emissions and low-carbon economy objectives in line with the goals of the Paris Agreement. While pursuing our renewable-focused development, we closely monitor the climate change policies of the trade associations of which we are a member or with which we cooperate.

Where the public policy position of a trade association of which we are a member conflicts with the objectives of the Paris Agreement or with Zorlu Enerji's net zero strategy, an escalating process is applied. At the first stage, our formal position is communicated to the association's working groups and management, and negotiations are initiated to align the policy with science-based targets. Should the misalignment persist, the Company publicly states through a press release or its corporate reports that it does not share the view concerned and sets out its independent 1.5°C position. If constructive change is not achieved within the period determined, our corporate membership is suspended or terminated upon the recommendation of the relevant units and the approval of Senior Management. In this way, by maintaining an ethical, transparent and consistent position on climate change, we act in alignment with both our strategic objectives and the public interest.

In the 2025 reporting period, no instance was identified in which the public policy positions of the trade associations of which we are a member conflicted with the objectives of the Paris Agreement or with our net zero strategy.

In line with our commitments, as Zorlu Enerji we continue to work towards achieving net zero carbon emissions across our entire value chain, and with the validation of our 2030 and 2040 targets by the Science Based Targets initiative (SBTi) we are aligned with the Paris Agreement. Our 2030 and 2040 targets are set out in the table below.

Targets	Base Year	Target Year	Target Type
Reduce scope 1 emissions from electricity and heat generation by 73.71% per MWh by 2030	2021	2030	Intensity
Reduce scope 2 emissions by 42%	2021	2030	Absolute
Reduce scope 1 and scope 3 emissions from fuel- and energy-related activities covering all electricity sold by 73.71% per MWh	2021	2030	Intensity
Reduce all other scope 3 emissions by 25%	2021	2030	Absolute
Reduce scope 1 emissions from electricity and heat generation by 97.7% per MWh by 2040	2021	2040	Intensity
Reduce scope 2 emissions by 90%	2021	2040	Absolute
Reduce scope 1 and scope 3 emissions from fuel- and energy-related activities covering all electricity sold by 97.8% per MWh	2021	2040	Intensity
Reduce all other scope 3 emissions by 90%	2021	2040	Absolute

Our corporate memberships and the level of representation within the Company are set out below.

Institutions and Organisations of which We are a Member	Representative	Position within the Company	Position within the Institution or Organisation	Responsibilities of the Representative
DEİK (Foreign Economic Relations Board)	Elif Yener	CEO	Member Representative	Carries out work to support business development activities such as conducting the foreign economic relations of the Turkish private sector and increasing Türkiye's exports. Attends the general assemblies of the business councils of which the Company is a member and holds the right to elect and be elected to their executive boards.
DEİK Energy Business Council	Elif Yener	CEO	Member Representative	Attends general assemblies and holds the right to elect and be elected to executive boards.
DEİK Türkiye - USA Business Council	Elif Yener	CEO	Member Representative	Attends general assemblies and holds the right to elect and be elected to executive boards.
DEİK Foreign Investments Business Council	Elif Yener	CEO	Member Representative	Attends general assemblies and holds the right to elect and be elected to executive boards.
DEİK Türkiye - Pakistan Business Council	Elif Yener	CEO	Member Representative	Attends general assemblies and holds the right to elect and be elected to executive boards.
ETD (Energy Traders Association)	Elif Yener	CEO	Member Representative	Supports work aimed at preparing the infrastructure required for energy trading to be conducted freely and at establishing ethical rules in trading, and participates in general assembly votes.
INTES (Turkish Employers' Association of Construction Industries)	Elif Yener	CEO	Member Representative	Shares its views on the association's activities and attends sectoral meetings.
DEK (World Energy Council Turkish National Committee Association)	Elif Yener	CEO	Member Representative	Attends the symposia, congresses and conferences organised by the association and meets with sector leaders. Contributes through working groups to the preparation of reports bringing together representatives of the public sector, the private sector and universities.
UN Global Compact Türkiye - Association of Global Compact Signatories	Elif Yener	CEO	Member Representative	The representative attends the meetings and work of the working groups to which they are appointed; informs association members about the working groups in which they participate.
Union of Chambers and Commodity Exchanges of Türkiye - Energy Assembly	Elif Yener	CEO	Member Representative	Attends sectoral gatherings and events. Holds voting rights at the general assembly.
TÜSİAD (Turkish Industry and Business Association)	Elif Yener	CEO	Member Representative	Representatives attend and contribute to the meetings and work of the working groups to which they are appointed; inform association
